

ANASTASIIA BORODINA

SOFTWARE DEVELOPER | AI & DATA FOCUS

CONTACT

- +421-9506-69698
- una.stazia.bo@gmail.com
- Žilina, Slovakia
- www.linkedin.com/in/anastasiia-borodina-411255398
- github.com/UnaStaziaBo
- learn.unastazia.com

CORE COMPETENCIES

- Data & SQL
- Backend & System Architecture
- Frontend Development
- SAP & ABAP
- Microsoft Office

CERTIFICATIONS

- Google Prompting Essentials Specialization
- R Programming
- MATLAB (Statistics Onramp)
- IBM AWS Cloud Days 2026 Professional Training
- CCNA: Introduction to Networks
- Emotional Support & Team Communication Training

LANGUAGES

- Ukrainian (Native)
- Russian (Native)
- Slovak (Fluent)
- English (Intermediate)

PROFILE

Analytically oriented Computer Science graduate pursuing graduate studies in Intelligent Information Systems, with a strong interest in practical software development, intelligent systems and working with structured data.

Developed backend and web-based applications in academic projects, with experience using Python, React and SQL. Explored AI-assisted solutions where they can enhance data analysis and intelligent software systems. Continuously expanding knowledge of cloud technologies and deployment practices to better understand the full software development lifecycle.

Recognized for analytical thinking, curiosity, the ability to quickly learn new technologies, and delivering practical solutions in both academic projects and competitive team environments.

HACKATHON EXPERIENCE

Erste Digital Hackathon 2025 — 2nd Place
<https://www.erstedigital.com/sk/hackathon>

- Applied Agentic AI principles to design and prototype a fintech solution for simulating long-term financial outcomes
- Defined system architecture and led technical implementation strategy
- Designed logic for financial scenario modeling and data processing
- Developed and presented the solution, including project pitch

Deutsche Telekom IT Solutions Slovakia
<https://github.com/UnaStaziaBo/NEDA-Natural-Electronic-Devices-Advisor>- **Ecological Chatbot NEDA**

- Advisor on electronic devices with recommended environmental ratings
- Proposed the solution concept and contributed to system architecture
 - Contributed to implementing a Flask-based backend for an AI-powered recommendation system
 - Applied LLM-based decision logic using OpenAI API
 - Participated in developing interaction between AI and backend
 - Led the preparation and delivery of the final project presentation

Hack Kosice 2026
<https://github.com/UnaStaziaBo/StepToLife>- **StepToLife**

- An adaptive system for people in vulnerable situations that helps them find their way in a new environment and take things one step at a time
- Proposed the product concept and led the final presentation and project defense
 - Applied AI Orchestration principles for task planning, communication support, and guidance flows
 - Designed adaptive UI logic that dynamically adjusts to user comfort
 - Focused on accessibility and usability for vulnerable user groups, reducing cognitive and interaction barriers

SELECTED PROJECTS

Smart AI system for personalized educational materials

learn.unastazia.com

- Designed a multi-layer application architecture
- Developed a React frontend and Flask backend
- Integrated REST APIs and external services
- Implemented asynchronous task processing with Redis Queue
- Built an AI pipeline using LangChain, OpenAI, Chroma, and Retrieval-Augmented Generation (RAG)
- Generated structured learning materials and PDF reports
- Deployed the application on a Hetzner VPS with Nginx and Cloudflare

TMTP — Project-Aware AI Mentor for Developers

<https://github.com/UnaStaziaBo/TMTP-project-aware-AI-mentor-for-developers>

- Developed a VS Code extension using TypeScript
- Built a repository analysis pipeline for project structure and dependency detection
- Integrated AI providers (OpenAI, Anthropic, Gemini) for context-aware code explanations
- Created interactive project visualization and guided learning features
- Applied modular architecture, automated testing, and reusable components

AI Adaptive Assistant — Full-Stack AI System

<https://github.com/UnaStaziaBo/Adaptive-service-with-AI-orchestration>

A full-stack web application featuring an intelligent, voice-enabled chat interface with adaptive UI theming and AI-powered image generation & editing capabilities.

- Designed a full-stack app with React frontend and Flask backend
- Built a multi-agent AI system for chat, UI, and image generation
- Integrated OpenAI API for chat and image features
- Developed adaptive UI with theming, accessibility, and voice controls
- Implemented real-time interaction with memory and speech I/O

Database-Oriented Academic System (SQL / PostgreSQL)

<https://github.com/UnaStaziaBo/Database-Oriented-Academic-System>

Simplified structured database system that supports knowledge transfer

- Designed relational database schema.
- Implemented SQL queries and stored procedures.
- Developed PL/pgSQL function logic for data validation.
- Worked with structured entity relationships.
- Ensured data consistency and logical correctness.

Web-Based Game with Java Backend

<https://unastaziabo.itch.io/volans-sort-puzzle-game>

<https://github.com/UnaStaziaBo/Volans-Sort>

Puzzle-based sorting game implemented in two complementary versions:

Web version (JavaScript):

- Browser-based gameplay and UI using JavaScript, HTML and CSS.
- Rendering with HTML5 Canvas and sound with Web Audio.
- Implementation of core puzzle mechanics and interactive gameplay.

Java version (Spring Boot):

- Backend component for managing game data and user interactions.
- REST controllers and service layer for application logic.
- JPA-based persistence for users, scores, ratings and comments.

EDUCATION

Technical University of Košice

BSc in Computer Science
Graduation: 2026

University of Žilina, Slovakia

Ing. in Intelligent Information
Systems

Expected start: September 2026

FOCUS / INTERESTS

- Practical software development and system design
- Cloud technologies and modern deployment practices
- User-centered design and accessibility in software systems
- Intelligent systems and applied artificial intelligence
- Generative AI and its use in real-world applications
- Data analysis and working with structured data
- Language learning and cross-cultural communication (currently studying Chinese)

SOFT SKILLS

- Strong ownership and initiative in project development
- Structured and analytical thinking
- Clear and confident communication, including project presentations
- User-centered and product-oriented mindset
- High attention to detail
- Effective team collaboration
